Information to Property Owners Re: Southampton North End Project

Please be advised that your home is now connected to a temporary water line. As you have probably already noticed there are blue water lines lying above the ground and connected to your house. These temporary waterlines have been installed to ensure continuous water service to your property during construction.

For most homes the temporary waterlines have been connected to the houses using the existing outside taps. If your home has been connected in this manner and water is not working when you arrive be sure to check that the tap that is located on the temporary watermain is turned on and your outside tap has been turned on where the blue line is connected. Please do not operate the town curb stops as they need to remain in the off position.

For some homes it was necessary to be connected to the existing waterline underground as there was no outside tap available on the house. In these cases, if you arrive and your water is not working please check the tap that is located on the temporary watermain to make sure it is on.

The contractor did not turn water on to any homes that were unoccupied at the time of connection.

We appreciate your co-operation and regret any inconvenience.
